

This is a free educational tool designed for **teaching sound synthesis**. You can use it for free and give it to your friends.

A lot of love has been put into this device, so if you like it, send us a note or write about it.

Installation:

- If the file included has a “dll” ending, it is a VST plugin. Find your VSTplugins folder, copy the dll file inside, and restart your daw.
- If the file included has an “exe” ending it is a stand alone application. Just double click the file, and choose your audio/midi interface from the main menu.

Please note, our synthesizers have very few presets for a reason. We believe electronic music's main artistic focus is sound. This is why every musician should strive to use his own presets and enjoy his own unique sound!
